Dream, Invent, Create, Engineer the World! by Start Engineering

Price at time of review: \$5.95

39 pp.

Start Engineering

2013

ISBN: 9780991077601

Grade Level: **2-5**Reviewed by **Ruth Ruud**

"Dream, Invent, Create" targets an early childhood audience as a first book for children to learn about engineering and what engineers do. The book is in paperback form with 38 pages of content, attractive graphics, and activities that relate to the world of engineers.

The text is written in rhyme which would aid the students in remembering information from the text. Engineering fields presented are in the fields of space, food and medicine, energy, environmental, robotic and engineering used in ocean and land explorations. There is a short explanation of the type of engineering presented around the edge of each colorful page. The activities include "Think about It" questions relating to the text, "Scavenger Hunt" to search for the details in the illustrations, and a team activity to build "a free-standing structure". Informational text supports the Next Generation Science Standards in grades K-2.
